PROFESSIONAL SUMMARY

Backend Developer with 2+ years of hands-on experience at Padepokan 79, directly involved in enterprise projects for clients including PT Kereta Api Indonesia (KAI), PT Sarana Multi Infrastruktur (SMI), and Bank Victoria. Day-to-day work covers Java Spring Boot and Go — building event-driven microservices with Kafka, optimizing PostgreSQL queries, and untangling poorly structured legacy codebases. Comfortable working with Redis, Docker, and Kubernetes in live production environments. Bachelor's degree in Computer Science from Binus University, graduating 2026.

TECHNICAL SKILLS

Backend Languages: Java (v11, v17), Go (Golang), TypeScript, JavaScript, Python

Frameworks: Spring Boot (v2/v3), NestJS, Node.js/Express, Fiber (Go), Django, Flask

API & Integration: RESTful API, GraphQL, OpenFeign, WebSocket, Swagger/OpenAPI, Firebase FCM, SMTP

Security: Spring Security, JWT, OAuth2, Bcrypt, DTO Sanitization

Databases: PostgreSQL, MySQL, MongoDB, Microsoft SQL Server (MSSQL), Redis (caching)

ORM / Query: JPA/Hibernate, TypeORM, GORM, Spring Data

Message Brokers: Apache Kafka, ActiveMQ Artemis

DevOps & Infrastructure: Docker, Kubernetes, Jenkins, Minio, SonarQube

Architecture: Microservices, Event-Driven Architecture, Hexagonal Architecture, Monolith Refactoring

Testing & Quality: JUnit, Mockito, Jest, SonarQube, Swagger API Docs

Frontend (supporting): React.js, Next.js, Material UI

WORK EXPERIENCE

Backend Software Developer

March 2024 – March 2026

PT Padepokan Tujuh Sembilan (Padepokan 79) — Bandung, Indonesia

Software consulting firm delivering enterprise backend systems across fintech, transportation, and banking sectors.

- Built and maintained production backend systems across 7+ enterprise projects in 2 years, spanning fintech, railway operations, and banking domains.
- Core stack: Java Spring Boot and Go — consistently assigned to high-complexity modules including event-driven messaging, legacy refactoring, and data migration.
- Worked directly with enterprise clients: PT Sarana Multi Infrastruktur (SMI), PT Kereta Api Indonesia (KAI), and Bank Victoria.
- Enforced code quality through SonarQube analysis, Swagger API documentation, and structured DTO validation pipelines.
- Contributed to DevOps workflows: Docker containerization, Kubernetes deployment environments, and Jenkins CI/CD pipelines.

PROJECT EXPERIENCE

Loan Origination System (LOS) | PT Sarana Multi Infrastruktur (SMI)

November 2025 – March 2026

Tech: Java 17, Spring Boot 3, Apache Kafka, Redis, MSSQL, JPA, OpenFeign, Docker, Minio, Jasper Report

- Architected decentralized event-driven microservices using Kafka for async event processing and OpenFeign for synchronous inter-service communication within an enterprise loan platform.
- Resolved Kafka consumer race conditions and duplicate-processing bugs by implementing proper topic partitioning and idempotency strategies.
- Eliminated JPA N+1 query bottlenecks and introduced Redis caching to reduce database load and improve API response latency.
- Built complex batch processing and data migration pipelines for financing bucket progression across large entity graphs.

TRAINPLAN – Railway Schedule Management System | PT KAI

April 2025 – October 2025

Tech: Java 17, Spring Boot 3, Spring Security, JPA, PostgreSQL 16, Docker, Minio, iText PDF, Swagger

- Led backend migration of a live legacy CodeIgniter-based railway scheduling system to Spring Boot 3, with zero disruption to ongoing operations during the transition.
- Rebuilt core business logic for train dispatching — scheduling accuracy, slot conflict prevention, and operational data integrity across dynamic business rules.
- Conducted targeted debugging to resolve critical migration-phase regressions and maintain system stability post-refactoring.

Company Portal (COMPOR) | PT Padepokan Tujuh Sembilan

October 2024 – November 2024

Tech: NestJS v10, TypeScript 5, TypeORM, PostgreSQL 16, Jest, Bcrypt, SMTP, SonarQube, Docker

- Built RESTful APIs with pagination, dynamic filtering, and relational data management for HR, document management, finance, and task-tracking modules.
- Implemented JWT-based authentication with NestJS in-memory caching; standardized responses across 50+ endpoints via NestJS interceptors.
- Wrote Jest unit tests, maintained SonarQube quality gates, delivered full Swagger API documentation, and integrated Nodemailer for transactional email workflows.

Victoria IBMB – Internet & Mobile Banking Platform | Bank Victoria

August 2024 – September 2024

Tech: Spring Boot 2, Java 11, PostgreSQL 11, Artemis v2, Kubernetes

- Executed large-scale financial data migration from Excel files into PostgreSQL — designed the import pipeline for zero data loss and full integrity across complex relational structures.
- Debugged critical Excel import/export issues causing data truncation and blank field errors in the production banking portal.

Aeroswift – Airline Ticket Booking App | Synrgy Academy x Binar Bootcamp

December 2023 –

February 2024

Tech: Java 17, Spring Boot 3, PostgreSQL 16, Firebase FCM, Jasper Report, WebSocket, Xendit, Stripe, Docker

- Integrated Xendit and Stripe payment gateways — handled webhook callbacks, transaction verification, and idempotent payment state management.
- Built automated PDF invoice generation with Jasper Report and real-time push notifications via Firebase FCM on successful payment events.

IoT Locomotive Simulation – Real-Time Backend | PT Padepokan 79

March 2024 – July 2024

Tech: Spring Boot 3, Node.js/Express, Apache Kafka 3, PostgreSQL 16, MongoDB 5, Docker, React.js

- Designed and built the full backend pipeline: Spring Boot for the core API and Telegram notification service; Node.js/Express for publishing IoT sensor data into Kafka topics.
- Dual-database strategy: PostgreSQL for structured operational data, MongoDB for high-volume time-series IoT event storage.

Ngaksoro – Kampus Merdeka x Dicoding Capstone

May 2023 – June 2023

Tech: Python 3.9, Flask, Firebase Storage, Kotlin Android, CNN/TensorFlow

- Built a Python Flask REST API to handle Javanese script image data submitted from an Android app, integrated with a CNN/TensorFlow character recognition model.

ORGANIZATIONAL EXPERIENCE

Head of Internal Department | D3 Application Software Engineering Student Association

January 2022 – January 2023

Universitas Telkom, Bandung

- Coordinated all members and work programs of the internal department — team management, scheduling, and ensuring alignment between program activities and organizational goals.

EDUCATION

Bachelor's Degree (S1) – Computer Science

Graduated 2026

Universitas Bina Nusantara (Binus) | GPA: 3.58 / 4.00

Thesis: Application of the Decision Tree Algorithm in a Mobile App to Predict Consumer Interest in Skincare Products as a Digital Innovation in the Beauty Industry.

Associate Degree (D3) – Application Software Engineering

Graduated 2023

Universitas Telkom | GPA: 3.84 / 4.00

Final Project: SMAFE – IoT-based smart fish feeding system. Roles: Backend (Python Flask REST API), IoT Firmware (C++/Arduino), Mobile (Kotlin Android — Coroutines, Retrofit, Mockito, Room DB).

Bangkit Academy – Android Mobile Development

February 2023 – July 2023
